The Problem

Many businesses are not receiving the desired functionality from their database reporting:

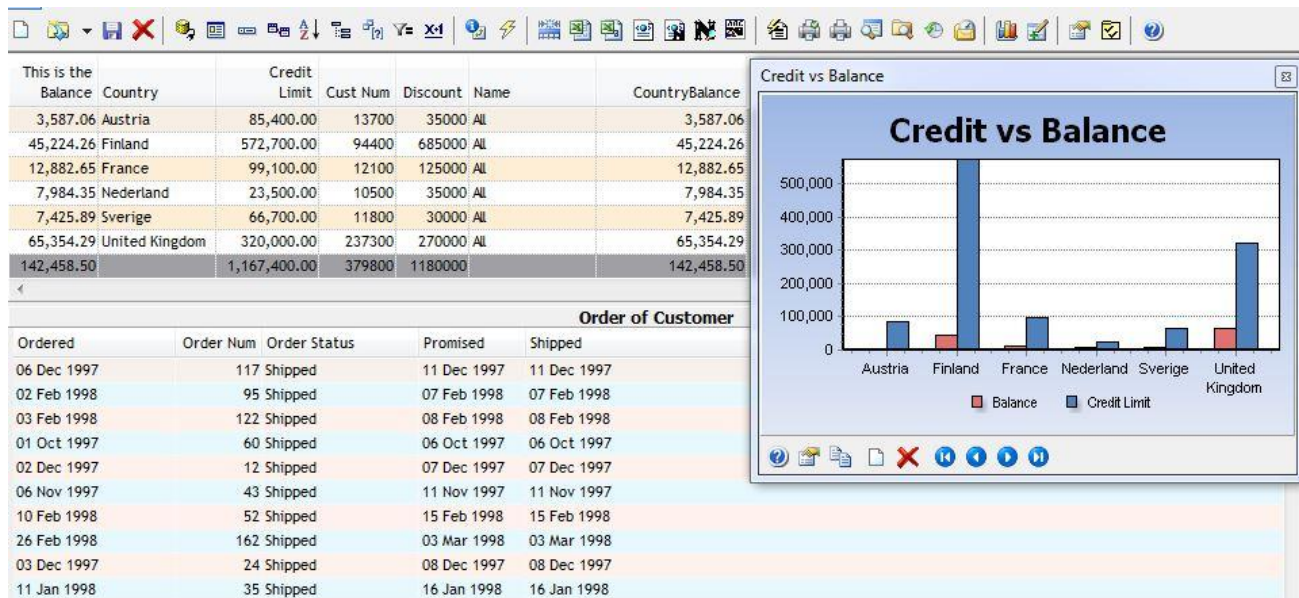

- They can't design their own ad hoc queries (or change any existing queries), needing an external provider to design them at a significant cost.
- They don't have any control in how the reports are presented (often boring text-based documents).
- They are spending countless man hours executing the same reports every week, with no option to automate the system.
- They are spending significant amounts on printing operations, with no way to eliminate the paper trail and digitalise their operations
- Management are struggling to consolidate all relevant reports for decision making and KPI monitoring (analytics).

The Solution

The NuVu Query Suite is an affordable, integrated software suite of programs which allow for the direct interrogation of your underlying application databases using advanced OLEDB technology.

- Use any tables and fields to form new reports
- No need to modify existing application (i.e. no further costs)
- Results of queries may be output to Excel, CSV, XML, PDF and other formats

Query Suite

AD HOC REPORTING – The user-friendly query wizard allows for quick selection of relevant databases, tables and fields to be used in the query. An example of the raw results generated looks like this:

Country	Name	Balance	Credit Limit	Cust Num	Sales Rep	Credit Card	Order Num	Ordered	Order Status	Promised	Shipped

Query Suite

FORMATTING – Within 5 minutes we can enhance this example set of results by:

- **Splitting joined tables to show on separate grids** (removing multiple lines per customer on the main grid).
- **Grouping and totalling data** – grouped by country, with totals for each as well as a grand total. Also creates hyperlink tree view to the left.
- **Creating calculated fields** based on data we already have – in this case now we are able to show the remaining credit as a dollar amount, and percentage.
- **Formatting** – change money data to show in \$ format (comma separated)
- **Conditional Formatting** – text is green if remaining percentage is greater than 80%, and red if lower than 20%.
- **Charts** – Pie chart showing total balance per country and bar chart to represent the calculated field 'Remaining Credit'
- **Line Banding** – for ease of viewing

Our results now looks much better...

Query Suite cont...

REPORT DESIGNER – Once we have the results looking as we want them, we can now invoke the powerful reporting wizard to produce aesthetically pleasing reports.

- Change font, font size, colour etc
- Line banding
- Add company logos and any other images needed
- Import any number of graphs and charts
- Formatting established within the query is carried over to the report
- Add barcodes

Next you will see the report derived from the results generated in the previous slides. This default report was achieved with one click of the mouse, however unlimited changes can be made (a set of varied example reports will follow the next).

SCHEDULER – The Scheduling tool allows your business to automate the running of selected queries:

- How often should the report be run? Ever hour? Once a day? On the 20th of every month?
- Once it is run, do you want it printed? Saved to file? E-mailed to all branch managers? Faxed directly to your clients?

Job Id	Active	Description	Tenant ID	Run Now	Date Last Submitted

DASHBOARD – The Executive Dashboard tool provides a container screen to display results of any selected queries.

- Pinpoint only the most relevant KPI's to display
- Display results in many different types of charts and graphs, making for easier deciphering
- Updates live any time a report is run, allowing for real-time monitoring of KPI's
- Embed RSS feeds from the internet or intranet
- Drill down to any number of alternate dashboards in order to further analyse data

An example of a customised dashboard

Query Suite cont...

EASE OF USE – Point and click/drag and drop interface ensures all users will be proficient with minimal training. The complexity of the database can be hidden from the mid-level user, allowing them to focus on the data that matters to their role.

SANITISATION - Tables and/or fields are able to be renamed to more user-friendly names. Administrators also have the power to remove any tables and/or fields that are of no interest to anyone. Descriptions can be attached to any field or table, meaning any new users are able to familiarise themselves quickly with the databases.

THIN-CLIENT - The NuVu Query Suite is totally thin-client – so a user can connect to the repository and execute a query from anywhere in the world, without suffering the performance issues of thick-client technologies.

SECURE – Unlike many other query tools, administrators can “hide” database tables at a user level. In addition, advanced row-level security rules can be created to prevent users from accessing individual rows within tables.

Query Suite cont...

CUSTOM VIEWS – This feature allows for a master designer within the business to design multiple query templates for mid-level designers to work off. This ensures that the mid-level designers will not have to worry about the complex database schema, creating calculated fields, table joins, filters, and many other complex database aspects.

With custom views, the mid-level designer simply selects a view (or template) from a drop down list that they have been approved to use, and can add their own personal touches from there. This is very useful for large organisations with many users, where a significant number of users aren't skilled in database navigation.

Pricing and Support

We have a variety of pricing options available, based on your organisations' requirements:

- Individual Organisations (per user – sliding scale, per site)
- Re-sellers
- Distributors

Licenses are divided into two categories:

- Designer
 - Full administration rights to access and modify queries and report access
 - Security rights per user, down to table and field access
 - Database schema changes, lookups and table relationships.
 - Query design, report design, updates and creations of report templates
 - Display, print and export report results
 - Other back-end administration activities
- Run-time
 - Display, print and export report results

A 20% Annual Maintenance Fee allows you the benefit of free upgrades and tech-support throughout the paid period.

Please [contact](#) us to discuss pricing further.
